GGPv ..20/70	from index 16D
BGPv 64/84..	from index 15D

all versions

Fault profile: The electronics indicate error message "Eht" and the compressor no longer switches on.

Cause: The "Eht" (evaporator high temperature) error message means that the evaporator has become too hot (hotter than +60°C). The compressor is switched off to avoid consequential damage.

Possible causes include:

- solenoid valve does not close
- evaporator sensor is signalling the wrong value

To correct: Diagnose appliance and replace defective component.

Note: To acknowledge the message the appliance must be switched off by pressing the On/Off button and the mains plug pulled out.
