Nome 047....**Zip** 

La cartella del firmware contiene i file necessari per eseguire le operazioni di aggiornamento e recovery di tutte le macchine dotate di scheda NEWTON.

E' pertanto possibile utilizzare **UN'UNICA USB PENDRIVE**, decomprimendo la cartella del firmware e copiando i file contenuti al suo interno nel percorso principale della USB Pendrive.

The firmware folder contains the files needed to carry out update and recovery operations for all machines with a NEWTON card.

Therefore, **A SINGLE USB PENDRIVE** can be used, unzipping the firmware folder and copying the files inside to the main path on the USB Pendrive.

Le dossier du micrologiciel contient les fichiers nécessaires pour effectuer les opérations de mise à jour et de recovery de toutes les machines dotées de carte NEWTON.

Par conséquent, il est possible d'utiliser **UNE SEULE CLÉ USB**, en décompressant le dossier du micrologiciel et en copiant les fichiers qu'il contient dans le parcours principal de la clé USB.

Der Firmware-Ordner enthält die nötigen Dateien, um die Vorgänge zur Aktualisierung und Wiederherstellung aller Geräte durchzuführen, die mit einer NEWTON Platine ausgestattet sind.

Daher kann **EIN EINZIGER USB-STICK** verwendet werden, wobei der Firmware-Ordner entpackt (dekomprimiert) wird und die darin enthaltenen Dateien in den Hauptpfad des USB Pendrive kopiert werden müssen.

La carpeta del firmware contiene los archivos necesarios para realizar las operaciones de actualización y recovery de todas las máquinas equipadas con tarjeta NEWTON.

Por tanto, se puede utilizar **UN ÚNICO PENDRIVE USB**, descomprimiendo la carpeta del firmware y copiando los archivos contenidos en su interior en el recorrido principal del Pendrive USB.

A pasta do firmware contém os ficheiros necessários para realizar as operações de atualização e recuperação de todas as máquinas equipadas com placa NEWTON.

Sendo assim, é possível utilizar **UMA ÚNICA PEN USB**, deszipando a pasta do firmware e copiando os ficheiros presentes no interior no percurso principal da Pen USB.

# Aggiornamento Software Scheda Newton: **BOOT 3.5 e precedenti**

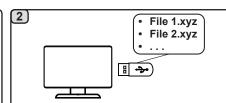

#### INDICAZIONI PRELIMINARI

L'operazione potrebbe durare parecchi minuti. Non spegnere la macchina, né rimuovere la USB Pendrive fino al completamento dell'aggiornamento.

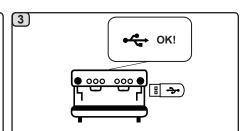

Utilizzare preferibilmente una USB Pendrive con led di funzionamento.

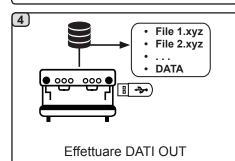

Formattare USB Pendrive (es. Windows FAT32).

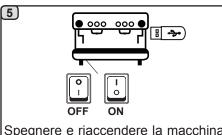

Decomprimere la cartella del firmware e copiare tutti i file contenuti al suo interno nel percorso principale della USB Pendrive.

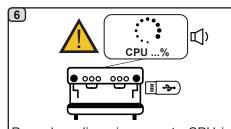

Inserire USB Pendrive in macchina e attendere il riconoscimento.

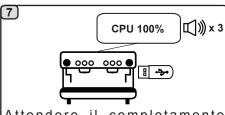

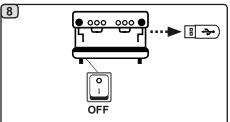

Procedura di aggiornamento CPU in corso (beep brevi a intermittenza).

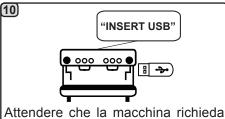

Attendere il completamento dell'aggiornamento CPU (almeno 3 beep lunghi).

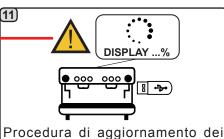

Spegnere la macchina e rimuovere la USB Pendrive.

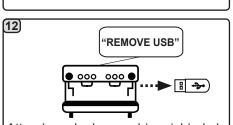

Attendere che la macchina richieda l'inserimento della USB Pendrive, quindi inserirla.

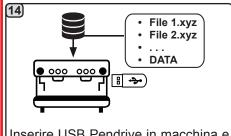

Procedura di aggiornamento de display in corso.

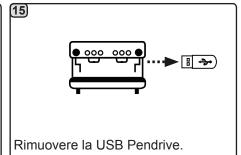

Attendere che la macchina richieda la rimozione della USB Pendrive, quindi rimuoverla.

Inserire USB Pendrive in macchina e effettuare DATI IN.

Durante l'aggiornamento delle macchine con versioni di display più datate, potrebbe esser necessario eseguire la calibrazione dei display. **Da effettuare senza rimuovere la USB Pendrive**.

La procedura di aggiornamento riprende automaticamente al termine della calibrazione.

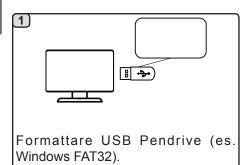

# Aggiornamento Software Scheda Newton: **BOOT 3.6 e successivi**

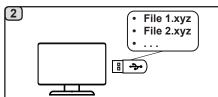

#### INDICAZIONI PRELIMINARI

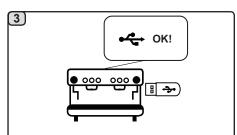

L'operazione potrebbe durare parecchi minuti. Non spegnere la macchina, né rimuovere la USB Pendrive fino al completamento dell'aggiornamento.

Utilizzare preferibilmente una USB Pendrive con led di funzionamento.

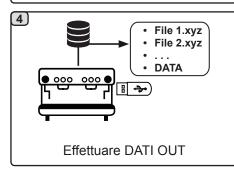

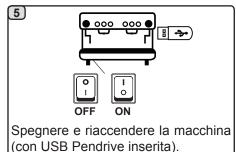

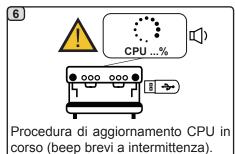

Decomprimere la cartella del firmware e copiare tutti i file contenuti al suo interno nel percorso principale della USB Pendrive.

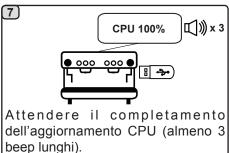

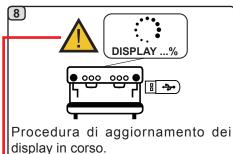

Inserire USB Pendrive in macchina e attendere il riconoscimento.

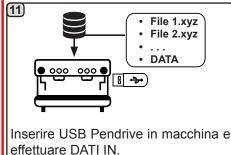

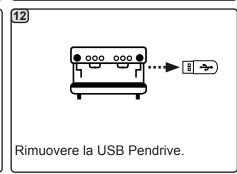

Durante l'aggiornamento delle macchine con versioni di display più datate, potrebbe esser necessario eseguire la calibrazione dei display. **Da effettuare senza rimuovere la USB Pendrive**.

La procedura di aggiornamento riprende automaticamente al termine della calibrazione.

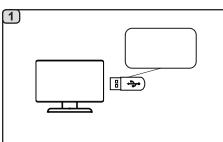

## **Recovery Scheda Newton**

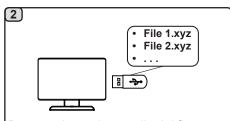

#### INDICAZIONI PRELIMINARI

L'operazione potrebbe durare parecchi minuti. Non spegnere la macchina, né rimuovere la USB Pendrive fino al completamento dell'operazione.

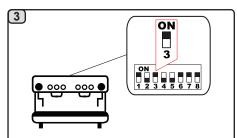

Utilizzare preferibilmente una USB Pendrive con led di funzionamento.

Formattare USB Pendrive (es. Windows FAT32).

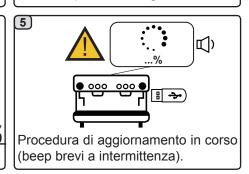

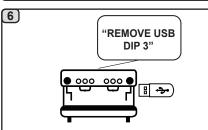

Decomprimere la cartella del firmware e copiare tutti i file contenuti al suo interno nel percorso principale della USB Pendrive.

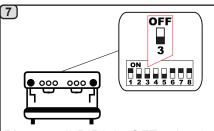

Con macchina spenta, posizionare il DIP3 in ON e lasciare tutti gli altri DIP nella loro posizione originale.

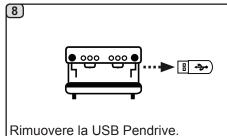

Attendere la richiesta rimozione della USB Pendrive e di ripristino della posizione del DIP 3.

Riportare il DIP3 in OFF e lasciare tutti gli altri DIP nella loro posizione originale.

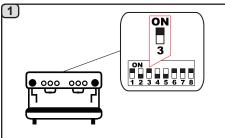

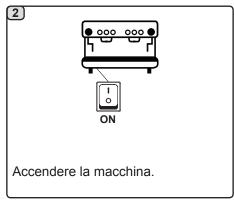

**NOTA**. Qualora si rimuovesse la USB Pendrive prima del ripristino della posizione del DIP3 inizierà in automatico la procedura di calibrazione dei display.

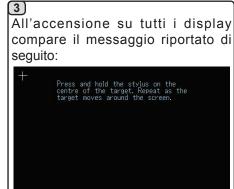

La procedura di Recovery è comunque andata a buon fine.

# **Calibrazione Display**

Con macchina spenta, posizionare il DIP3 in ON e lasciare tutti gli altri DIP nella loro posizione originale.

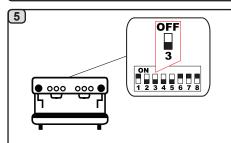

Con una penna mantenere premuto nel centro del crocino; ripetere l'operazione in tutti i punti dove compare il crocino.

Eseguire la calibrazione su tutti i display o solo su quelli dove è necessario.

Al termine dell'operazione spegnere la macchina. Riportare il DIP3 in OFF e lasciare tutti gli altri DIP nella loro posizione originale.

# Messaggistica di errore e Troubleshooting

MESSAGGIO DI ERRORE	CAUSA	RIMEDIO

NOTA: la barra di caricamento dati può assumere una colorazione differente in alcune condizioni:

• barra colore GIALLO: normale caricamento aggiornamento SW;

• barra colore <u>VERDE</u>: aggiornamento completato;

 barra colore <u>ROSSO, GRIGIO, BIANCO, VIOLA, ROSA, AZZURRO, ARANCIONE, BLU</u> messaggio di errore (controllare PenDrive USB, eventualmente effettuare procedura di Recovery).

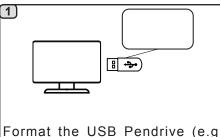

# Newton Board Software Update: **Boots 3.5 and previous**

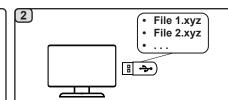

#### PRELIMINARY INFORMATION

The operation may take several minutes. Do not turn off the machine or remove the USB Pendrive until the update is complete.

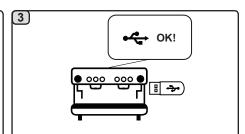

It is preferable to use a USB Pendrive with an LED that indicates status.

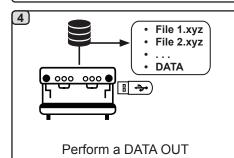

Format the USB Pendrive (e.g. Windows FAT32).

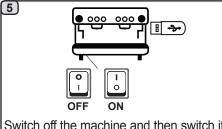

Unzip the firmware folder and copy all the files inside to the main path on the USB Pendrive.

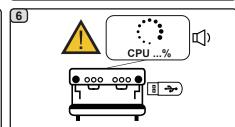

Insert the USB Pendrive in the machine and wait for it to be recognised.

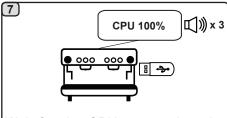

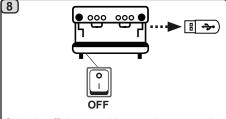

Switch off the machine and then switch it on again (with the USB Pendrive inserted).

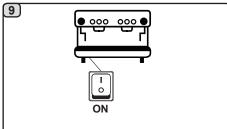

The CPU update procedure is under way (short intermittent beeps).

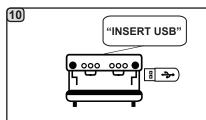

Wait for the CPU to complete the update (at least 3 long beeps).

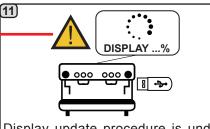

Switch off the machine and remove the USB Pendrive.

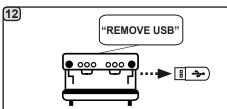

Switch the machine on again.

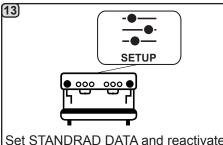

Wait for the machine to ask that the USB Pendrive be inserted, then insert it.

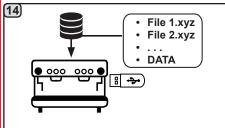

Display update procedure is under way.

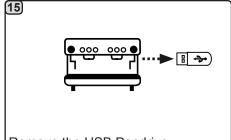

Wait for the machine to ask that the USB Pendrive be removed, then remove it.

Set STANDRAD DATA and reactivate the heating element.

Insert the USB Pendrive in the machine and perform DATA IN.

Remove the USB Pendrive.

With older display versions, it may be necessary to calibrate the display while the machine is updating. **This** should be done without removing the USB Pendrive.

The update procedure will continue automatically when calibration is completed.

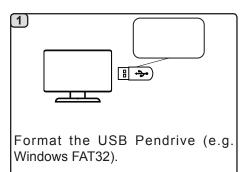

## Newton Board Software Update: Boots 3.6 and later

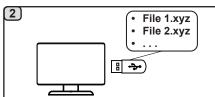

#### PRELIMINARY INFORMATION

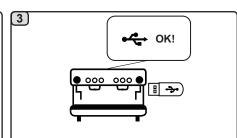

The operation may take several minutes. Do not turn off the machine or remove the USB Pendrive until the update is complete.

It is preferable to use a USB Pendrive with an LED that indicates status.

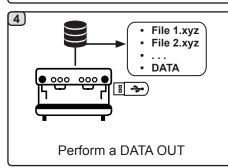

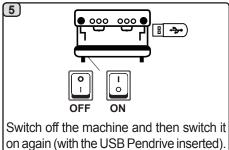

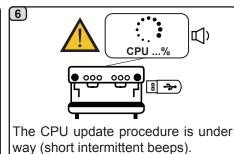

Unzip the firmware folder and copy all the files inside to the main path on the USB Pendrive.

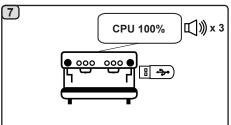

Insert the USB Pendrive in the machine and wait for it to be recognised.

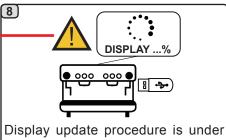

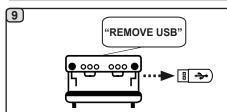

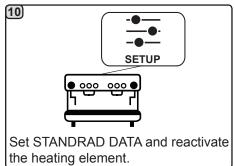

Wait for the CPU to complete the update (at least 3 long beeps).

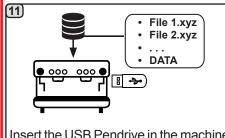

way.

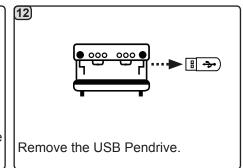

Wait for the machine to ask that the USB Pendrive be removed, then remove it.

Insert the USB Pendrive in the machine and perform DATA IN.

With older display versions, it may be necessary to calibrate the display while the machine is updating. This should be done without removing the USB Pendrive.

The update procedure will continue automatically when calibration is completed.

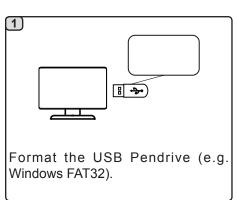

# **Newton Board Recovery**

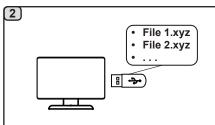

#### PRELIMINARY INFORMATION

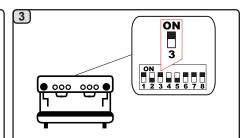

The operation may take several minutes. **Do not turn off the machine or remove the USB Pendrive until the operation is complete.** 

It is preferable to use a USB Pendrive with an LED that indicates status.

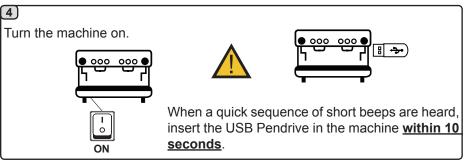

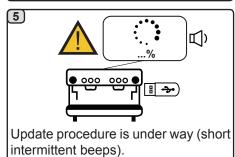

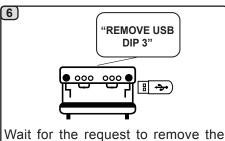

Unzip the firmware folder and copy all the files inside to the main path on the USB Pendrive.

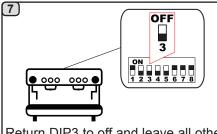

With the machine off, set DIP3 to ON and leave all other DIPs in their original positions.

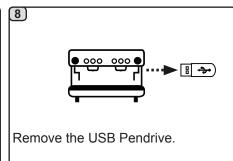

USB Pendrive and restore the DIP3 position.

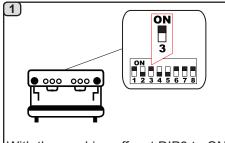

Return DIP3 to off and leave all other DIPs in their original positions.

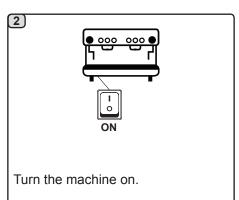

**NOTE**. If the USB Pendrive is removed before DIP3 is returned to its original position, the display calibration procedure will start automatically. Nonetheless, the Recovery procedure has been completed successfully.

# **Display calibration**

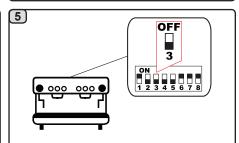

With the machine off, set DIP3 to ON and leave all other DIPs in their original positions.

Using a pen hold down the centre of the cross; repeat the operation in all the points where the cross appears. Perform the calibration on all the displays or only on those where it is required.

Turn the machine off when the operation is complete. Return DIP3 to off and leave all other DIPs in their original positions.

# Error messages and troubleshooting

ERROR MESSAGE	CAUSE	SOLUTION
«CHECK HW»	<ul> <li>Incompatibility between one or more displays</li> <li>Incompatibility between mechanical keyboards and touch interface or vice versa</li> </ul>	' '
«EXECUTE SLAVE UPDATE 050.00.x0 → 050.00.R0»	CPU Slave version not compatible with CPU Master (issues with slowness during start up and recognition of the USB Pendrive)	the start
«UPDATE FAILURE»	Update file missing or invalid	Check all software update files are present

# **Check-control messages**

CODE	DESCRIPTION	SOLUTION
-1 -5 -6 -7	Attempt to load data in a flash memory address of the CPU board that is invalid or reserved for the BOOT program	<ul> <li>Reprogram the USB flash drive with the appropriate files and repeat the operations.</li> <li>If the problem persists:</li> <li>Contact the service centre to get the correct software version.</li> </ul>
-2 -3 -4 5 6	Malfunction of the flash memory of the CPU board	Repeat the data transfer to the CPU board.  If the problem persists:     Replace the CPU board and contact the service centre.
1 3	Failed or incorrect data transfer from USB-micro Slave CPU	<ul> <li>Check that the USB Pen Drive is correctly inserted, including the board USB-port wiring, and repeat.  If the problem persists:</li> <li>Replace the USB Pen Drive and repeat.  If the problem persists:</li> <li>Replace the CPU board and contact the service centre</li> </ul>
2 4	Format or size of data received from USB invalid.	<ul> <li>Reprogram the USB flash drive with the appropriate files and repeat the operations.</li> <li>If the problem persists:</li> <li>Contact the service centre to get the correct software version.</li> </ul>

NOTE: the data loading bar will change colour in some instances

• bar colour **YELLOW**: SW update loading normally;

• bar colour **GREEN**: update complete;

• bar colour <u>RED, GREY, WHITE, PURPLE, PINK, LIGHT BLUE, ORANGE, DARK BLUE</u> error message (check USB, start Recovery if needed).

# Mise à Jour Logiciel Carte Newton : **BOOT 3.5 et versions précédentes**

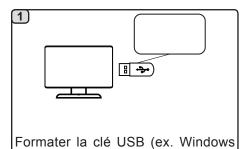

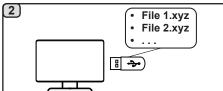

FAT32).

#### INDICATIONS PRÉALABLES

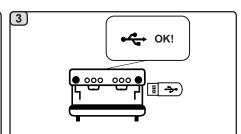

L'opération pourrait durer plusieurs minutes. Ne pas éteindre la machine ni retirer la clé USB avant la fin de la mise à jour.

Utiliser de préférence une clé USB avec LED de fonctionnement.

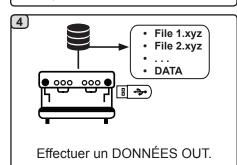

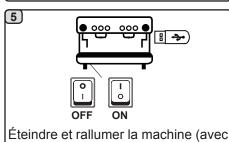

Décompresser le dossier du micrologiciel et copier tous les fichiers qu'il contient dans le parcours principal de la clé USB.

Insérer la clé USB dans la machine et attendre qu'elle la reconnaisse.

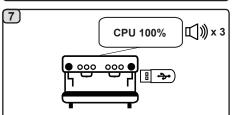

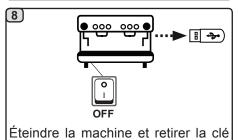

la clé USB insérée).

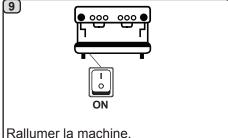

USB.

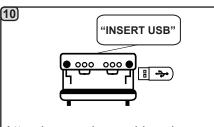

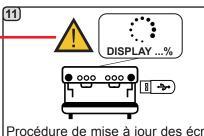

Attendre la fin de la mise à jour de la CPU (au moins 3 bips longs).

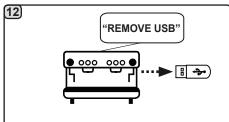

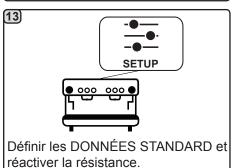

Attendre que la machine demande d'insérer la clé USB, puis l'insérer.

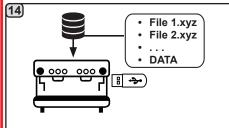

Procédure de mise à jour des écrans en cours.

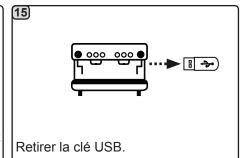

Attendre que la machine demande de retirer la clé USB, puis la retirer.

Insérer la clé USB dans la machine et effectuer un DONNÉES IN.

Lors de la mise à jour des machines avec des versions d'écrans plus anciennes, il pourrait être nécessaire d'effectuer l'étalonnage des écrans. À effectuer sans retirer la clé USB.

La procédure de mise à jour reprend automatiquement à la fin de l'étalonnage.

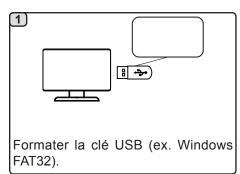

# Mise à Jour Logiciel Carte Newton : <u>BOOT 3.6 et versions suivantes</u>

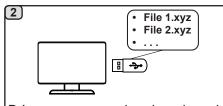

#### INDICATIONS PRÉALABLES

# **Recovery Carte Newton**

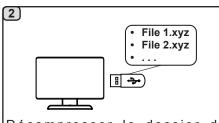

#### INDICATIONS PRÉALABLES

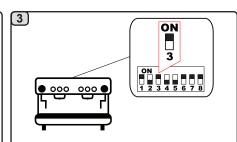

L'opération pourrait durer plusieurs minutes. Ne pas éteindre la machine ni retirer la clé USB avant la fin de l'opération.

Utiliser de préférence une clé USB avec LED de fonctionnement.

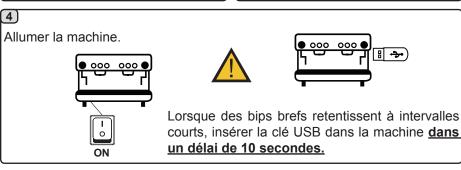

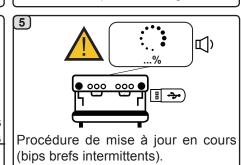

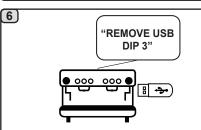

Décompresser le dossier du micrologiciel et copier tous les fichiers qu'il contient dans le parcours principal de la clé USB.

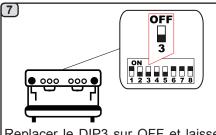

Avec la machine éteinte, placer le DIP3 sur ON et laisser tous les autres DIP dans leur position d'origine.

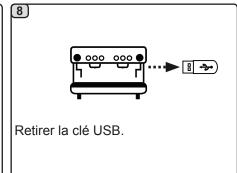

Attendre la demande de retrait de la clé USB et de rétablissement de la position du DIP3.

Replacer le DIP3 sur OFF et laisser tous les autres DIP dans leur position d'origine.

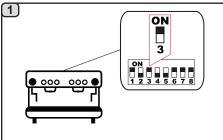

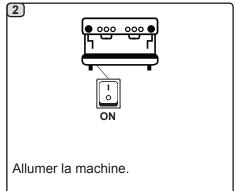

**REMARQUE**. Si la clé USB est retirée avant le rétablissement de la position du DIP3, la procédure d'étalonnage des écrans commence automatiquement.

La procédure de Recovery a quand même été effectuée avec succès.

# Étalonnage de l'écran

Avec la machine éteinte, placer le DIP3 sur ON et laisser tous les autres DIP dans leur position d'origine.

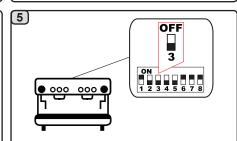

Enfoncer un stylo au centre de la croix ; répéter l'opération dans tous les points où apparaît la croix.

Effectuer un étalonnage sur tous les écrans ou seulement sur les écrans où l'étalonnage est nécessaire.

À la fin de l'opération, éteindre la machine. Replacer le DIP3 sur OFF et laisser tous les autres DIP dans leur position d'origine.

# Softwareaktualisierung der Platine Newton: **BOOT 3.5 und vorhergehende Versionen**

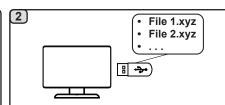

#### **VORABINFORMATIONEN**

Der Vorgang kann mehrere Minuten dauern. Die Maschine nicht ausschalten und den USB-Stick nicht entfernen, bis die Aktualisierung abgeschlossen ist.

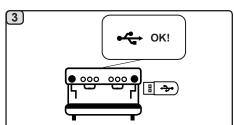

Vorzugsweise sollte ein USB-Stick mit einer Funktions-LED verwendet werden.

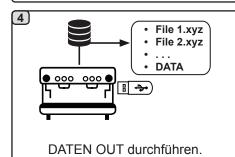

Den USB-Stick formatieren (z. B. Windows FAT32).

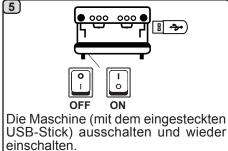

Den Firmware-Ordner entpacken (dekomprimieren) und alle darin enthaltenen Dateien in den Hauptpfad des USB-Sticks kopieren.

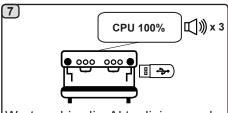

Den USB-Stick in die Maschine stecken und warten, bis das Gerät ihn erkennt.

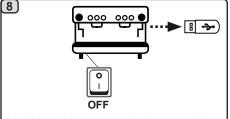

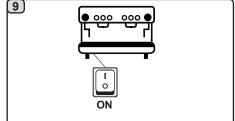

Der Vorgang zur Aktualisierung der CPU läuft (intermittierende Pieptöne).

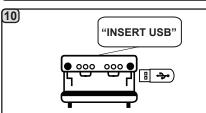

Warten, bis die Aktualisierung der CPU beendet ist (mindestens 3 lange Pieptöne).

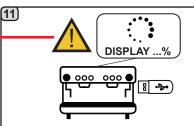

Die Maschine ausschalten und den USB-Stick entfernen.

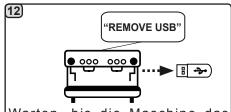

Die Maschine wieder einschalten.

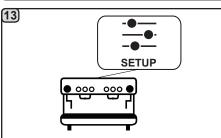

Warten, bis die Maschine das Einstecken des USB-Sticks anfordert und ihn dann einstecken.

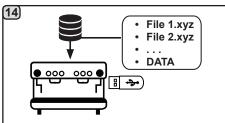

Der Vorgang zur Aktualisierung des Displays läuft.

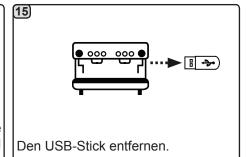

Warten, bis die Maschine das Entfernen des USB-Sticks anfordert und ihn dann entfernen.

Die STANDARDDATEN einstellen und den Widerstand erneut zuschalten.

Den USB-Stick in die Maschine stecken und den Vorgang "DATEN IN" durchführen.

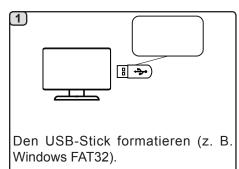

# Softwareaktualisierung der Platine Newton: <u>BOOT 3.6 und neuere Versionen</u>

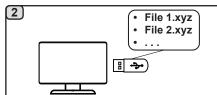

#### **VORABINFORMATIONEN**

Der Vorgang kann mehrere Minuten dauern. Die Maschine nicht ausschalten und den USB-Stick nicht entfernen, bis die Aktualisierung abgeschlossen ist.

Vorzugsweise sollte ein USB-Stick mit einer Funktions-LED verwendet werden.

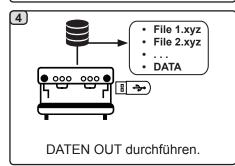

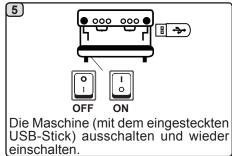

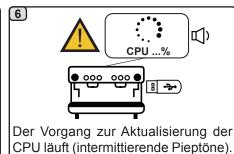

Den Firmware-Ordner entpacken (dekomprimieren) und alle darin enthaltenen Dateien in den Hauptpfad des USB-Sticks kopieren.

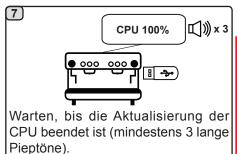

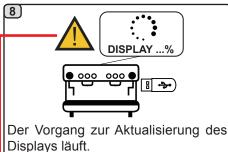

Den USB-Stick in die Maschine stecken und warten, bis das Gerät ihn erkennt.

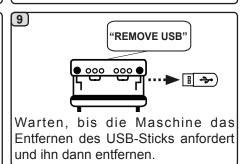

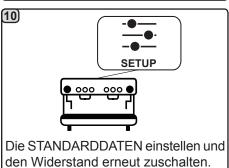

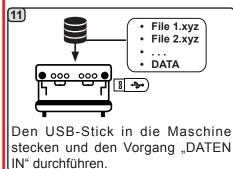

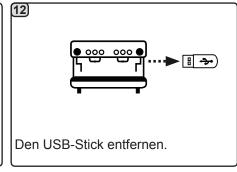

Während der Aktualisierung von Maschinen mit älteren Display-Versionen kann es notwendig sein, eine Kalibrierung des Displays vorzunehmen. **Die Kalibrierung durchführen, ohne den USB-Stick zu entfernen**. Der Aktualisierungsvorgang startet wieder automatisch, wenn die Kalibrierung beendet ist.

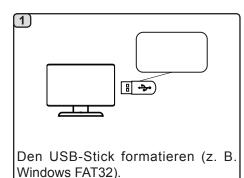

# **Recovery der Platine Newton**

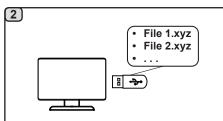

#### **VORABINFORMATIONEN**

Der Vorgang kann mehrere Minuten dauern. Die Maschine nicht ausschalten und den USB-Stick nicht entfernen, bis der Vorgang abgeschlossen ist.

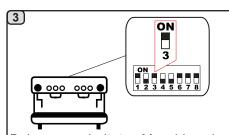

Vorzugsweise sollte ein USB-Stick mit einer Funktions-LED verwendet werden.

Den Firmware-Ordner entpacken (dekomprimieren) und alle darin enthaltenen Dateien in den Hauptpfad des USB-Sticks kopieren.

**∄** → →

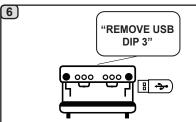

Bei ausgeschalteter Maschine den Schalter DIP3 auf die Position ON stellen und alle anderen DIP-Schalter in der ursprünglichen Position belassen.

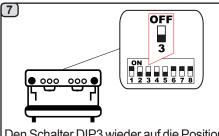

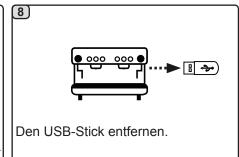

Der Vorgang zur Aktualisierung läuft (intermittierende Pieptöne).

Warten, bis angefordert wird, den USB-Stick zu entfernen und den DIP3 wieder umzustellen.

Den Schalter DIP3 wieder auf die Position OFF stellen und alle anderen DIP-Schalter in der ursprünglichen Position belassen.

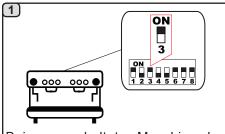

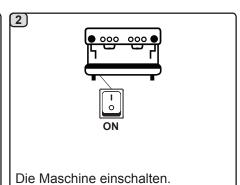

HINWEIS. Wird der USB-Stick entfernt, bevor der DIP3 wieder in die alte Position umgelegt wurde, beginnt automatisch der Vorgang zur Kalibrierung des Displays.

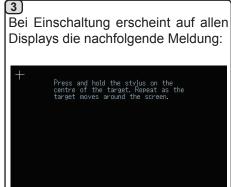

Der Recovery-Vorgang wurde jedoch korrekt beendet.

# **Display Kalibrierung**

Bei ausgeschalteter Maschine den Schalter DIP3 auf die Position ON stellen und alle anderen DIP-Schalter in der ursprünglichen Position belassen.

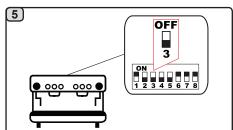

Mit einem Kugelschreiber den Punkt in der Mitte des Kreuzes gedrückt halten. Dies an allen Stellen wiederholen, an denen das Kreuz erscheint.

Alle Displays oder nur jene kalibrieren, bei denen eine Kalibrierung erforderlich ist.

Die Maschine nach beendetem Vorgang ausschalten. Den Schalter DIP3 wieder auf die Position OFF stellen und alle anderen DIP-Schalter in der ursprünglichen Position belassen.

## Actualización Software Tarjeta Newton: **BOOT 3.5 y anteriores**

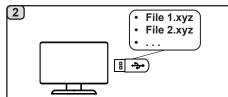

#### INDICACIONES PRELIMINARES

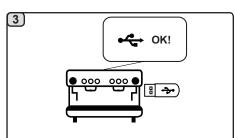

La operación podría durar varios minutos. No apagar la máquina ni retirar el Pendrive USB hasta que no se complete la actualización.

Utilizar preferentemente un Pendrive USB Pendrive con led de funcionamiento.

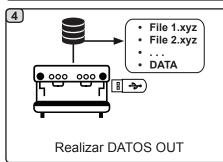

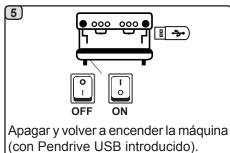

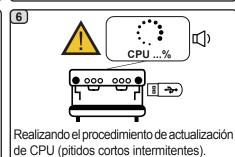

Descomprimir la carpeta del firmware y copiar todos los archivos contenidos en su interior en el recorrido principal del Pendrive USB.

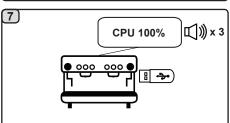

Introducir el Pendrive USB en la máquina y esperar a su reconocimiento.

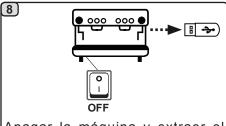

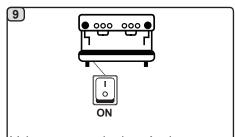

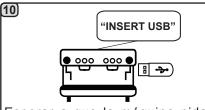

Apagar la máquina y extraer el Pendrive USB.

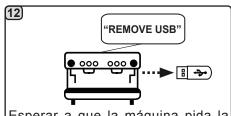

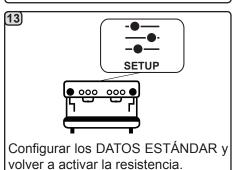

Esperar a que la máquina pida la introducción del Pendrive USB. Después introducirlo.

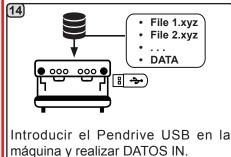

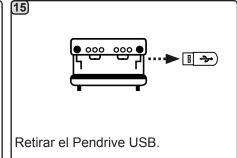

Realizando el procedimiento de actualización del visualizador.

Esperar a que la máquina pida la retirada del Pendrive USB. Después quitarlo.

Durante la actualización de las máquinas con versiones de visualizador más antiguas, podría ser necesario realizar la calibración de los visualizadores. **A realizar sin quitar el Pendrive USB**.

El procedimiento de actualización se retoma automáticamente al final de la calibración.

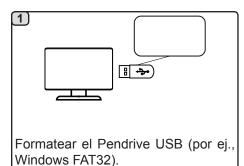

# Actualización Software Tarjeta Newton: **BOOT 3.6 y siguientes**

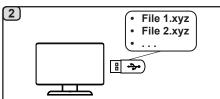

#### INDICACIONES PRELIMINARES

La operación podría durar varios minutos. No apagar la máquina ni retirar el Pendrive USB hasta que no se complete la actualización.

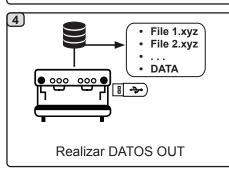

Utilizar preferentemente un Pendrive USB Pendrive con led de funcionamiento.

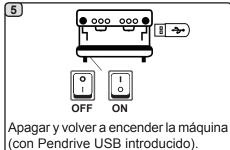

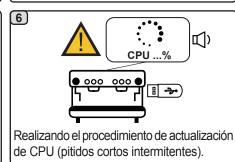

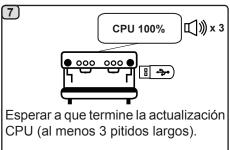

Descomprimir la carpeta del firmware y copiar todos los archivos contenidos en su interior en el recorrido principal del Pendrive USB.

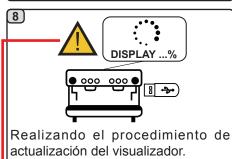

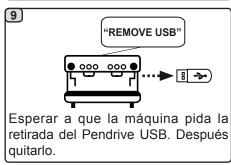

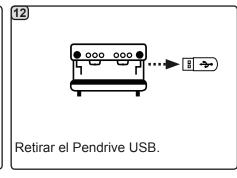

Durante la actualización de las máquinas con versiones de visualizador más antiguas, podría ser necesario realizar la calibración de los visualizadores. **A realizar sin quitar el Pendrive USB**.

El procedimiento de actualización se retoma automáticamente al final de la calibración.

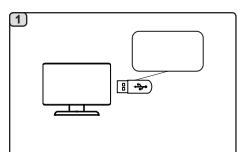

# **Recovery Tarjeta Newton**

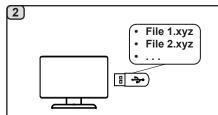

#### INDICACIONES PRELIMINARES

La operación podría durar varios minutos. No apagar la máquina ni retirar el Pendrive USB hasta que no se complete la operación.

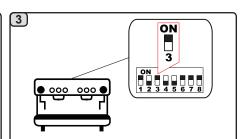

Utilizar preferentemente un Pendrive USB Pendrive con led de funcionamiento.

Formatear el Pendrive USB (por ej., Windows FAT32).

Descomprimir la carpeta del firmware y copiar todos los archivos contenidos en su interior en el recorrido principal del Pendrive USB.

Con la máquina apagada, posicionar el DIP3 en ON y dejar todos los demás DIP en su posición original.

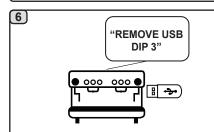

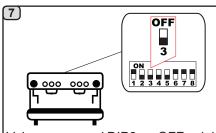

Cuando se oigan pitidos cortos en secuencia rápida, introducir el Pendrive USB en la máquina en 10 segundos.

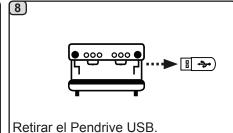

Realizando el procedimiento de actualización (pitidos cortos intermitentes).

Esperar a que se produzca la solicitud de retirada del Pendrive USB y de restablecimiento de la posición del DIP 3.

Volver a poner el DIP3 en OFF y dejar todos los demás DIP en su posición original.

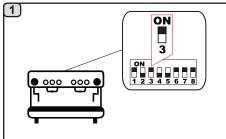

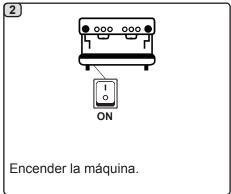

**NOTA**. En caso de que se retire el Pendrive USB antes del restablecimiento de la posición del DIP3, comenzará de forma automática el procedimiento de calibración de la pantalla.

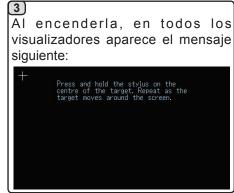

En todo caso, el procedimiento de Recovery se ha concluido correctamente.

## Calibración visualizador

Con la máquina apagada, posicionar el DIP3 en ON y dejar todos los demás DIP en su posición original.

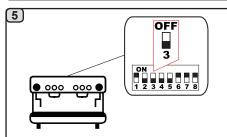

Presionar con un bolígrafo en el centro de la cruz y repetir la operación en todos los puntos donde aparece la cruz.

Efectuar la calibración en todos los visualizadores o solo en los que sea necesario.

Al final de la operación, apagar la máquina. Volver a poner el DIP3 en OFF y dejar todos los demás DIP en su posición original.

# Mensajes de error y solución de problemas

MENSAJE DE ERROR	CAUSA	SOLUCIÓN

NOTA: la barra de carga de datos puede tomar un color diferente en algunas condiciones

• barra color AMARILLO: carga actualización SW normal;

• barra color VERDE: actualización completada;

 barra color <u>ROJO, GRIS, BLANCO, VIOLETA, ROSA, AZUL, NARANJA, AZUL OSCURO</u> mansaje de error (controlar PenDrive USB, eventualmente efectuar el procedimiento de Recovery).

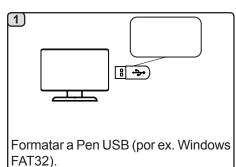

# Atualizar o Software da Placa Newton: BOOT 3.5 e anteriores

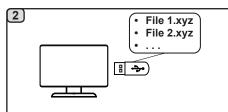

#### **INDICAÇÕES PRELIMINARES**

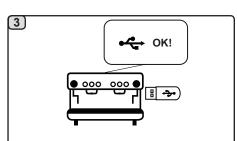

A operação pode durar vários minutos. Não desligar a máquina nem remover a Pen USB até terminar a atualização.

Utilizar de preferência uma Pen USB com led de funcionamento.

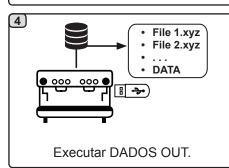

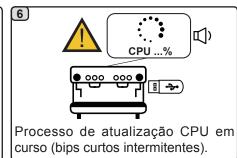

Deszipar a pasta do firmware e copiar todos os ficheiros presentes no interior no percurso principal da Pen USB.

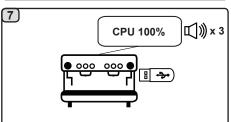

Inserir a Pen USB na máquina e aguardar o reconhecimento.

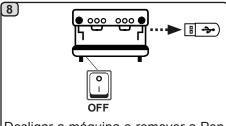

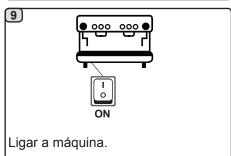

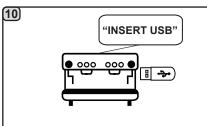

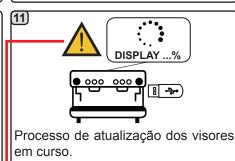

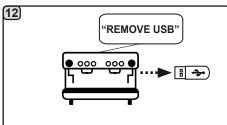

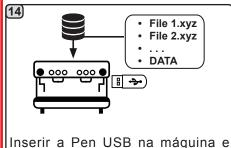

Aguardar que a máquina peça a inserção da Pen USB, depois inseri-la.

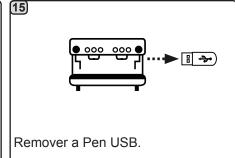

Aguardar que a máquina peça a remoção da Pen USB, depois removê-la.

executar DADOS IN.

Durante a atualização das máquinas com versões de visor mais antigas, pode ser necessário realizar a calibração dos visores. Efetuar sem remover a Pen USB.

O processo de atualização continua automaticamente no fim da calibração.

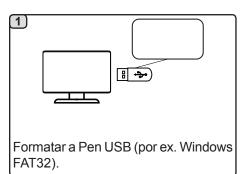

## Atualizar o Software da Placa Newton: BOOT 3.6 e posteriores

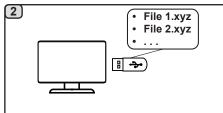

## **INDICAÇÕES PRELIMINARES**

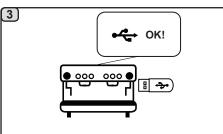

A operação pode durar vários minutos. Não desligar a máquina nem remover a Pen USB até terminar a atualização.

Utilizar de preferência uma Pen USB com led de funcionamento.

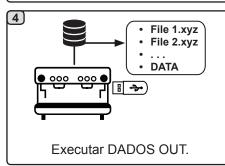

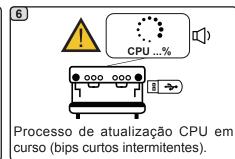

Deszipar a pasta do firmware e copiar todos os ficheiros presentes no interior no percurso principal da Pen USB.

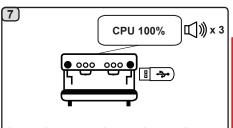

Inserir a Pen USB na máquina e aguardar o reconhecimento.

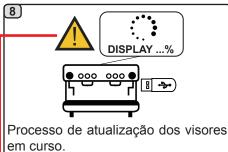

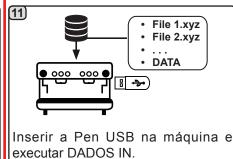

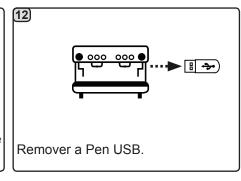

Durante a atualização das máquinas com versões de visor mais antigas, pode ser necessário realizar a calibração dos visores. **Efetuar sem remover a Pen USB**.

O processo de atualização continua automaticamente no fim da calibração.

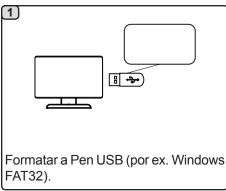

## **Recuperar a Placa Newton**

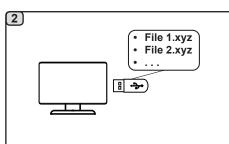

## **INDICAÇÕES PRELIMINARES**

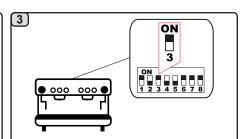

A operação pode durar vários minutos. Não desligar a máquina nem remover a Pen USB até terminar a operação.

Utilizar de preferência uma Pen USB com led de funcionamento.

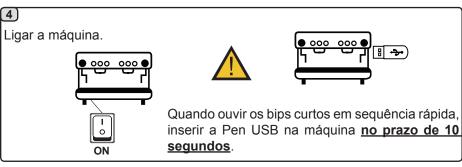

Deszipar a pasta do firmware e copiar todos os ficheiros presentes no interior no percurso principal da Pen USB.

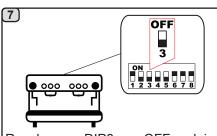

Com a máquina desligada, colocar o DIP3 em ON e deixar todos os outros DIP na sua posição original.

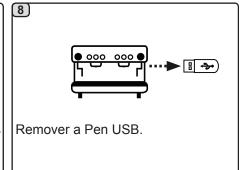

Aguardar a mensagem de remoção da Pen USB e de restauro da posição do DIP 3.

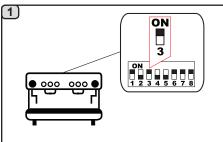

Recolocar o DIP3 em OFF e deixar todos os outros DIP na posição original.

**NOTA**. No caso de remover a Pen USB antes de restaurar a posição do DIP3 começa automaticamente o processo de calibração dos visores. O processo de Recuperação é igualmente bem sucedido.

# Calibração do mostrador

Com a máquina desligada, colocar o DIP3 em ON e deixar todos os outros DIP na sua posição original.

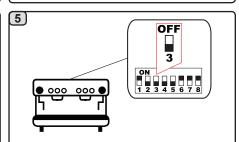

Ao efetuar o acendimento em todos os mostradores aparecerá a mensagem indicada a seguir:

+ Press and hold the stylus on the centre of the target. Repeat as the target moves around the screen.

Com uma caneta, premir no centro da cruz. Repetir a operação em todos os pontos onde aparece a cruz.

Efetuar a calibração em todos os mostradores ou somente naqueles necessários.

Ao concluir a operação, desligar a máquina. Recolocar o DIP3 em OFF e deixar todos os outros DIP na posição original.

# Mensagens de erro e Solução de Problemas

MENSAGEM DE ERRO	CAUSA	SOLUÇÃO
«VERIFICAR HW»	<ul> <li>Incompatibilidade entre um ou vários visores</li> <li>Incompatibilidade entre os teclados mecânicos e a interface tátil ou vice- versa</li> </ul>	visores e se a peça sobresselente é a
«EXECUTAR A ATUALIZAÇÃO SLAVE 050.00.x0 → 050.00.R0»	Versão CPU Slave não compatível com CPU Master (problemas de lentidão ao iniciar e detetar a Pen USB)	início
«AVARIA ATUALIZAÇÃO»	Ficheiro de atualização ausente ou não válido	Verificar a presença de todos os ficheiros de atualização do software

# Mensagens de diagnóstico

CÓDIGO AVARIA	DESCRIÇÃO	SOLUÇÕES
